BOMILL LAUNCHES APC FOR INCREASED EFFICIENCY

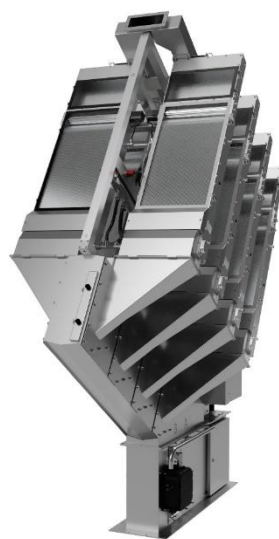

BoMill announces the launch of APC – Adaptive Protein Control, an add-on module based on near-infrared (NIR) technology enabling higher efficiency, real-time insights and validated protein content. With the modular design, the APC integrates seamlessly with BoMill InSight™.

Homogeneous products for increased value and efficiency

With its user-friendliness, the APC automatically adjusts according to desired protein content, improving sorting accuracy and providing valuable data insights. The automation reduces the need for manual protein analyses, minimizes the risk of human error enabling reliable 24/7 operation with minimal supervision.

As part of the BoMill InSight sorting solution, this functionality maximizes yield, improves grain utilization and reduces waste, helping customers increase profitability while achieving a more efficient and sustainable production process.

The APC supports both wheat and barley.

APC-module integrated with BoMill InSight™ on one outlet.

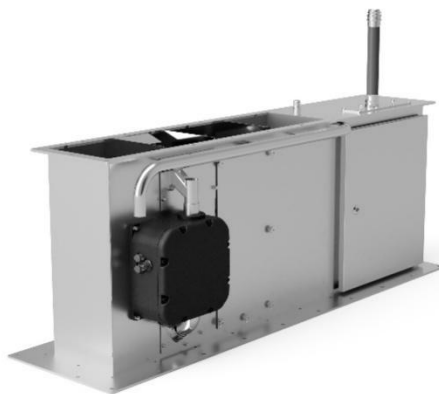

Collaboration

The APC system has been developed in collaboration with GrainSense Oy, a Finnish agtech company specializing in advanced grain analysis solutions based on patented NIR sensor technology.

Together with GrainSense, BoMill secured funding from the Eurostar program, enabling the development of this functionality. Through the collaboration, BoMill has integrated GrainSense technology into the BoMill InSight platform. The development has been completed and successfully commissioned at the customer site.

“The ability to integrate an additional dimension of precision into our grain sorting system marks an important step toward a more automated process where greater value can be captured,” said Andreas Jeppsson, CEO of BoMill. “We greatly appreciate the strong and well-executed collaboration with GrainSense.”

BoMill has developed and markets patented technology for sorting grain on a commercial scale, based on the internal qualities of each kernel. The method is the only one of its kind on the market today and is estimated to have the potential to become a Golden Standard within the industry.

The company is listed on Nasdaq Stockholm First North Growth Market under the ticker: BOMILL.
