BOMILL ENTERS INTO DISTRIBUTION AGREEMENT WITH TRIPETTE & RENAUD FOR THE FRENCH MARKET

BoMill AB (publ) has entered into a distribution agreement with Tripette & Renaud, a renowned supplier of equipment and services to the French flour milling sector. Through this agreement BoMill's latest grain sorting equipment, BoMill InSight™ will be included in Tripette & Renaud's product offering for the grain, malting and flour milling businesses.

"As part of our focused commercialization strategy, flour milling and malting are key segments, and France is one of the largest producers of flour and malt in Europe. We are excited to start building a long-term partnership with Tripette & Renaud. The company has a strong position in the flour milling, malting and grain businesses which will accelerate the commercial development of BoMill InSight™", commented Andreas Jeppsson, CEO of BoMill.

Tripette & Renaud was founded in 1836, producing mill stones for flour production. Since then, the company has always been known and recognized for the quality of its services and equipment dedicated to millers. Through partnerships with world leaders in the bulk industries, the company has developed, since 1981, its "Industrial Equipment" business, offering equipment dedicated to pneumatic handling, sieving, and sampling of all powdery and granular products. BoMill InSight™ will be part of the offering targeting the grain and flour milling businesses.

"We are excited to start our collaboration with BoMill on the French market. BoMill InSight is a revolutionary product that complements our offering and brings further solutions to our customers for grain quality and process optimization. ", says Marc Doligé, President of Tripette & Renaud.

BoMill InSight™ at a glance

BoMill InSight™ is BoMill's latest advanced grain sorting solution and the only one of its kind, capable of segregating kernel by kernel, at industrial speed (up to 15 metric tons per hour – 125,000 kernels per second), on grains' inner qualities such as protein content or fusarium contamination.

The equipment aims towards grain industrial companies with a sustainability agenda, willing to further optimize their grain supply while enhancing quality of their products. This includes grain producers (e.g. large cooperative, grain elevators) as well as processors such as flour mills and malt producers.

The revolutionary modular approach of BoMill InSight™ offers maximum flexibility for operations and easy upgradability. Its smart frame design and compact footprint allow easy and rapid installation in new or existing grain processing lines. And with its economic installation, operation, maintenance and upgradability, BoMill InSight™ is also cost-efficient, allowing fast return on investment to customers.
