BOMILL DOUBLE THE CAPACITY OF BOMILL INSIGHT™ TO 30 TONS PER HOUR

BoMill announces the launch of a new high-capacity configuration of BoMill InSight™, increasing the maximum sorting capacity from 15 up to 30 metric tons per hour while maintaining the same installation footprint. This reduces the investment cost per ton sorted and further strengthens the return on investment for customers. Developed in response to requests from existing and prospective customers, the new configuration enables large-scale in-line integration for flour mills, grain handlers and malhousers. Thanks to the modular design of the BoMill InSight™ platform, the new configuration will also be offered as an upgrade for existing installations.

The new configuration accommodates up to 14 sorting units and features a new service-friendly design that allows each sorting unit to be easily slid from its operating position into a service position, simplifying cleaning and maintenance while minimizing downtime. The combination of the new frame design and the increased throughput of each sorting unit doubles the maximum sorting capacity to 30 metric tons per hour, enabling BoMill to address the needs of significantly larger grain processing facilities.

Higher capacity and improved return on investment

By doubling the maximum capacity while maintaining the same platform footprint, customers can process substantially larger grain volumes with a lower investment cost per ton sorted. This further strengthens the already attractive return on investment offered by BoMill InSight™, making precision grain sorting accessible to an even broader range of grain processors.

Protecting customers' investments

The new configuration is fully compatible with the existing BoMill InSight™ platform, enabling existing customers to upgrade their installed BoMill InSight™ systems to the new high-capacity configuration, including upgrades to both the sorting units and the frame. Since the new frame has the same footprint, upgrades are straightforward and cost-efficient without replacing previously purchased sorting units. Existing sorting units can be integrated directly into the new frame, providing a cost-effective path to increased capacity.

This modular approach allows customers to expand capacity as their business grows while protecting previous investments and minimizing future upgrade costs.

The advantages of the BoMill InSight™ platform

The new high-capacity configuration has been specifically developed to facilitate in-line installation in high-capacity grain processing facilities while preserving all the advantages of the BoMill InSight™ platform.

"The launch of this new high-capacity configuration has been driven by strong demand from both existing customers and new prospects looking to integrate BoMill InSight™ into larger processing lines with an even better return on investment." said Andreas Jeppsson, CEO of BoMill

By combining high throughput, modular scalability and precision through single kernel analysis, the solution enables customers to optimize utilization of wheat and barley, improve product consistency and maximize the value of every grain lot.

BoMill InSight™ new configuration at a glance

- Designed for in-line installation in flour mills, grain handlers and maltings
- Capacity of up to 30 metric tons per hour
- Modular design with up to 14 sorting units
- Same installation footprint with double the capacity
- Fully compatible with existing BoMill InSight™ sorting units
- Improved return on investment through higher capacity
- Service-friendly design for simplified cleaning and maintenance
- Upgrade to the new configuration is available for existing BoMill InSight™ installations
- Proven single-kernel sorting technology based on Near-Infrared Transmittance (NIT)

BoMill has developed and markets patented technology for sorting grain on a commercial scale, based on the internal qualities of each kernel. The method is the only one of its kind on the market today and is estimated to have the potential to become a Golden Standard within the industry.

The company is listed on Nasdaq Stockholm First North Growth Market under the ticker: BOMILL.
