

FOR IMMEDIATE RELEASE:

Breakthrough orders to US and Canada!

BoMill AB have received their first commercial orders of their patented grain sorting technique, TriQ, into the North American market. CIGI (Canadian International Grain Institute) is one of the customers.

The TriQ technology can be used to sort durum wheat, soft wheat and malting barley on Fusarium, Protein and Vitreousness, with a speed of 24 000 kernels per second. This makes the TriQ very profitable for businesses within grain handling and milling.

Karin Wehlin, CEO, says “We see this as a major breakthrough into the North American market. Our patented technique, sorting each individual kernel by looking at its chemical structure shows an advantage of the existing solutions available on the market today.”

The other customers have chosen not to be public.

About

BoMill AB is a company with profound know-how within quality sorting of wheat, durum wheat and malting barley using single kernel sorting technology. The BoMill head office is in the University town of Lund, Sweden. The company sells quality sorting technology and know-how throughout Europe, North America and Australia, using its own sales organization or distributors.
