Adds more value to your grain

THE GRAIN BRIEF | ISSUE 02 | NOV 2026

THE GRAIN BRIEF

Insights on grain quality, technology and value

THE BIG IDEA

The cost of grain that misses specification

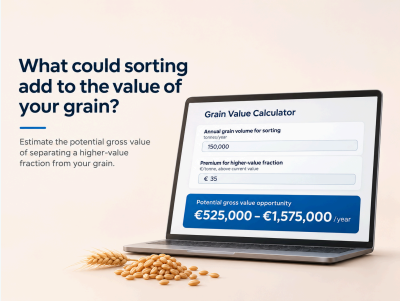

A grain lot that fails a protein specification can create costs beyond a simple price deduction.

For grain handlers supplying malting barley, the consequences may include downgrading, purchasing replacement grain or blending with higher-quality material. But a lot that misses its specification on average may still contain kernels suitable for the intended use.

Understanding the distribution inside that lot is the starting point for evaluating whether sorting could recover some of its value.

FROM BOMILL

Explore Your Grain's Potential.

Evaluating single-kernel sorting starts with understanding your grain, quality targets and operating conditions.

Explore our Potential Value Calculator as a starting point for a business case.

FROM THE FIELD

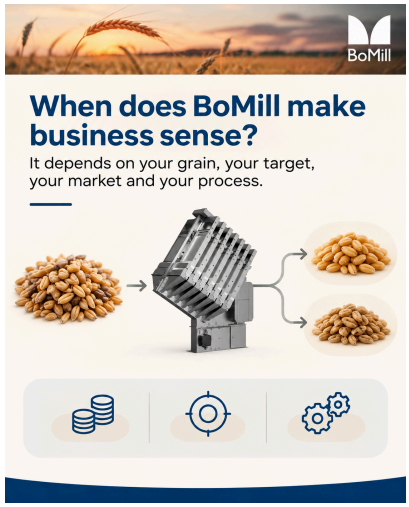

When does sorting make business sense?

Separating a grain lot into different fractions is only valuable when those fractions have a useful destination.

The business case depends on the original grain quality, target specifications, market value, processing volume and operating costs.

We explore the conditions that determine whether single-kernel sorting is worth investigating.

MEET BOMILL

Meet us at an upcoming event

From France to the Dominican Republic and South Africa — here's where you can meet the BoMill team next.

17–19 NOV	**Vrac Tech 2026** Douai, France
22–25 NOV	**ALIM 2026** Punta Cana, Dominican Republic
23–26 NOV	**IAOM MEA Conference & Expo** Cape Town, South Africa

Request a meeting →

Adds more value to your grain

BoMill is a Swedish grain technology company helping the industry unlock more value from every grain. Through precision sorting based on the internal qualities of each individual kernel, BoMill enables better utilization, greater efficiency and increased profitability.
